Dear Lamond:

Re: Nine Mile Creek  
1971 Assessment Rolls

I think it is a good policy that you also look over these rolls due to the fact that all the figures as you now see them are merely my interpretation. As you can see, the blue ink figures are 1970 assessments for comparison. The formula I used for 1971 is at the bottom of the assessment roll: \$ 350.00 divided by 27.90 CFS equals \$ 12.54480287, which equals the cost of one CFS. The other method used last year was a percentage of CFS multiplied times the total dollar assessment. (I am more used to the cost per CFS method, that is why I used it.) I have a copy of all the rolls I have enclosed, therefore we could discuss it by phone, if you think it feasible.

Thank you for your help.

Sincerely,

Dick Pexton

Encl.
